14. DATA GOVERNANCE & TRUTHFULNESS REQUIREMENTS

This dataset is fictional and intended for AI/RAG testing.

Known Dataset Facts: menu items, prices, standard hours, delivery zones, staff profiles, policies, restaurant address, and contact information.

Live Operational Information: current table availability, current order status, current rider location, current inventory, current kitchen workload, payment completion, and refund completion.

The AI agent must only provide live operational information when connected to the relevant live system.

Fallback Rule: When information is unavailable, the AI should say that it does not have confirmed information rather than generating a plausible answer.

Primary Objective: Accuracy, customer safety, policy compliance, cultural respect, and transparent uncertainty over answering every question.
